Egypt, Alexandria

Summary

Passionate and skilled Full Stack Developer with over 5 years of experience in designing, developing, and deploying web applications using Django and React. Adept at creating robust backend solutions with Django and crafting dynamic, responsive user interfaces with React. Demonstrated ability to collaborate effectively in Agile teams, deliver high-quality code, and solve complex technical problems. Committed to staying updated with the latest industry trends and continuously improving technical expertise. Strong background in database management, RESTful API design, and cloud deployment. Eager to contribute to innovative projects and drive technological advancements.

Experience

Senior Full Stack Python Developer

Globant • Riyadh - Remote 12/2025 - Present

- Continued development of the Saudi Tourism Authority Employees App, delivering new features and enhancing existing integrations with enterprise systems.
- Designed and built the STA Gateway, migrating a legacy MuleSoft application of 24 separate modules into a centralized API gateway unifying access to internal and third-party services.
- Implemented request routing, authentication and token management, rate limiting, and centralized logging across downstream services.
- Deployed and operated containerized services on Kubernetes, improving scalability, reliability, and release consistency.
- Collaborated with cross-functional teams to understand business requirements and develop technical solutions.
- Ensured code quality and maintainability by following industry best practices and coding standards.

Senior Full Stack Python Developer

Perfect Presentation - Cairo branch (STA Project) • Giza - Smart Village 05/2025 - 12/2025

- Collaborated with cross-functional teams to understand business requirements and develop technical solutions.
- Designed and developed secure, high-performance web applications using Django and React.
- Utilized Docker and Docker Compose for containerization and orchestration of applications, streamlining deployment processes and ensuring consistency across environments.
- Implemented asynchronous task processing using Celery, improving system efficiency and scalability.
- Ensured code quality and maintainability by following industry best practices and coding standards.
- Optimized application performance, scalability, and security through continuous improvement initiatives.

Senior Full Stack Developer

Inovola • Cairo 12/2022 - 05/2025

- Collaborated with cross-functional teams to understand business requirements and develop technical solutions.
- Designed and developed secure, high-performance web applications using Django and React.
- Utilized Docker and Docker Compose for containerization and orchestration of applications, streamlining deployment processes and ensuring consistency across environments.
- Implemented asynchronous task processing using Celery, improving system efficiency and scalability.
- Ensured code quality and maintainability by following industry best practices and coding standards.
- Optimized application performance, scalability, and security through continuous improvement initiatives.

Full Stack Developer

Div Systems • Cairo 06/2022 - 04/2025

- Collaborated with cross-functional teams to understand business requirements and develop technical solutions.
- Designed and developed secure, high-performance web applications using Django and React.
- Implemented asynchronous task processing using Celery, improving system efficiency and scalability.

- Ensured code quality and maintainability by following industry best practices and coding standards.

Full stack Developer

Mostaqel · Cairo 12/2021 - 07/2022

- Designed and developed secure, high-performance web applications using Django and React
- Implemented responsive and intuitive user interfaces, optimizing user experience and engagement.
- Ensured code quality and maintainability by following industry best practices and coding standards.

Education

Full Stack Development

ITI (Information Technology Institute) · Alexandria 11/2021

Three Months Diploma / ITI (Information Technology Institute) MCIT (Ministry of Communications and Information Technology) Open-Source Python Alexandria Branch

Commerce, Accounting

Alexandria University, · Alexandria 05/2016

Bachelor / Alexandria University, Faculty of Commerce, Accounting Department, Rating V-Good

---

Skills

Python, Django, Django Rest Framework, FastApi, Linux, Shell Scripting, AWS, GitHub, GithHub workflows, Apache, NGINX, JavaScript, Node.js, Express.js, Nest.js, HTML5, CSS3, Bootstrap, Tailwind, React.js, Next.js, Redux/RTK, Communication skills, Documentation review, Time management, Oracle Cloud Infrastructure, Celery, CI/CD, Github-Workflows, Docker, Docker-Compose, Kubernetes, OCI

Projects

STA Gateway

- STA Gateway is a centralized API gateway that unifies access to the Saudi Tourism Authority's internal and third-party services behind a single secure entry point.
- It is a full migration of a legacy MuleSoft application composed of 24 separate modules, re-implemented as a single maintainable Python gateway.
- It handles request routing, authentication and token management, rate limiting, and request/response validation across downstream systems.
- It provides centralized logging, monitoring, and error handling, simplifying troubleshooting and improving observability across services.
- Developed using Django, Django Rest Framework, and Celery.
- Deployment is handled with Docker and Kubernetes, with Nginx and PostgreSQL supporting routing and persistence.

Saudi Tourism Authority Employees App

- The Saudi Tourism Authority Employees System is an integration platform that simplifies employee interactions with enterprise systems.
- It integrates three systems: Agile, Oracle, and EWS, providing a unified interface for request creation and data retrieval.
- It features a mobile app for employees and a CMS admin panel for managing request types, fields, and configurations.
- Developed using Django, Django Rest Framework, and Wagtail.
- Deployment is handled with Docker and Nginx, with integrations for Celery, PostgreSQL, and PgBouncer to enhance performance and scalability.

Madar Sat

- Madar Sat is a football TV guide that shows which channel, satellite and frequency carry each match, with follows and push alerts and no account needed.
- Live as an installable PWA at madar-sat.web.app, with an Android app. Designed, built and operated end to end as a solo project.
- Developed using Flutter, FastAPI, Redis and Firebase Cloud Messaging, deployed with Docker.

Wassal Ogra

- Wassal Ogra is a casual mobile puzzle game: drive a Cairo microbus, collect fares passed forward seat by seat, and hand back exact change before each stop.
- Offline-first client that syncs to a server-side ledger, with in-app purchases and rewarded ads. Launching on Android in Egypt first.
- Developed using Flutter, Flame and Riverpod, with a Django, DRF, Celery, PostgreSQL and Redis backend.

Eshtarek

- Eshtarek is a subscription management system built on the multi-tenant architecture
- Developed using Django, DRF, React, Celery, Docker

Sand Beach

- The Sand Beach Nursery Management and Activities Reservation System is designed to streamline nursery operations
- It has four user interfaces: Parent, Cashier, Teacher, and Admin.
- It features user authentication, dashboards for managing child profiles, payments, and daily activities, and supports multi-branch management.
- Developed using React, Redux-Toolkit, TailwindCSS, Django, Django Rest Framework.
- Deployment is handled with Nginx and Gunicorn, and the system integrates GitHub Actions for CI, Sentry for monitoring, and various tools for code quality and testing.

Treecode

- Treecode is a shipping Management Software that helps you to manage your shipping business. It built on multi-tenant architecture
- Developed using Django, DRF, React, Celery, Docker

IFF

- Validation and auditing system built to validate consumer financial reports and convert them to *.DLT files depending on various roles
- Developed using Django, DRF, Next.js, Celery
